PhytoMax

(Advanced Phytase Enzyme)

Phytomax is a **feed enzyme** used to improve digestion and nutrient availability, especially phosphorus, from plant-based feed ingredients.

How it works :

Phytase breaks down phytic acid (phytate), which is the main storage form of phosphorus in grains. Poultry cannot digest phytate efficiently. Phytase can break down indigestible phytic acid (phytate), releasing bound phosphorus, calcium, and amino acids.

It improves nutrient digestibility, boosts growth performance, reduces feed costs by lowering the need for added inorganic phosphate, and mitigates environmental phosphorus pollution.

Composition : Phytase: 10,000 FTU/Gm

Benefits :

- Increases phosphorus absorption
- Improves bone development in broilers and eggshell quality in layers
- Lowers feed cost by reducing dependency on expensive mineral phosphorus sources
- Better feed conversion ratio (FCR)
- Better egg production efficiency in layers

Target birds : Broilers, Layers and breeders

Dosages : 100 gms per Ton feed

Pack size : 500 gms, 1000 gms & 25 kgs
